ARTEOR™ | FLOW OF ENERGIES
A GUIDE TO HOME AUTOMATION
For lovers of beautiful design, Arteor™ is an exquisite collection of electrical accessories and home automation solutions from Legrand. What separates Legrand products from other electrical accessories is meticulous attention to detail: from the selection of unique materials and even the feel of the switching action, to the simplicity of use. Arteor offers automation solutions for lighting management; blind, curtain and shutter control; temperature control; audio entertainment; intercom systems and security surveillance. Developed in design studios across France and Australia, Arteor is the result of an extensive 2 year study of global architecture, material and colour trends. It represents the future of electrical systems for design conscious homeowners, technology enthusiasts as well as those who simply want time-saving solutions for a more relaxed and comfortable lifestyle. Arteor’s defining factors include:

- **Design** - choose from a wide variety of unique switch styles - round, square, pushbutton and glass touchplates
- **Quality** - feel the Arteor products and you will instantly note their superior quality. Choose from 17 different finishes including leathers, woven metal and mirrored surfaces
- **Uniformity** - conventional devices, such as powerpoints, share the same design aesthetic as automation control devices so all your switch plates work in harmony
- **Modularity** - you only need to install and pay for the functions you want, not a huge complex system you will never use
- **Expandability** - you can easily upgrade your system to include more functions, even after it has been installed
- **Ease of use** - it is the easiest system to use!
What is Home Automation?

Think of Home Automation like the central nervous system in your body. Legrand Arteor automation systems allow all the electrical functions in your home - such as lighting, air-conditioning, audio entertainment, surveillance, video intercoms - to communicate with each other and be controlled together from central points. For example, from a ‘Goodnight’ switch in your bedroom you could turn off all the lights in the house and close all your blinds. And one button at your gate could light up the path to your home, as well as your front patio and internal lighting.

“A unique benefit of the Legrand Arteor system is that the different systems, like lighting and sound, are based on the same technology so they can be integrated with ease. This reduces programming time, complexity and problems.”
Discuss your house plans with your installer and quiz them on all the functions and benefits Arteor can offer you. Here’s a snapshot of the functions you may like:

1. Link your intercom system to your mobile phone and speak to your visitors when you are not home. You can even let people into your home remotely and watch them via a special phone app or via your laptop.

2. Include a ‘Goodbye’ scenario so you can quickly turn off all lighting, air-conditioning, floor heating, close blinds and turn on the third party alarm system when you leave the house.

3. Plug in an MP3 player and listen to whatever music you choose through ceiling and wall speakers. You can view and activate music files from any touchscreen, and listen to different audio sources and playlists in different rooms.

4. Program a ‘Goodnight’ scenario to turn off all lighting and shut all blinds, shutters and curtains.

5. Use an iPad, iPhone or Android phone to control your home lighting, sound, temperature and door entry systems.

6. Program a ‘Movie’ scenario to dim lighting and close blinds to set the scene for maximum viewing pleasure.

7. Control your split system air conditioner and view your energy consumption from your wall mounted touchscreen.

8. By using timers and sensors, have your blinds, shutters and curtains open and close according to natural light levels outside - this can help reduce energy consumption and keep your home more comfortable.

9. Program an ‘Entertaining’ scenario so that by pressing one button you set the perfect ambience - the lights on your back verandah dim, your ‘party’ play list starts playing, and your garden lights illuminate.

10. Make your home look lived-in when you are on holidays to deter thieves by programming blinds and lighting to activate at specific times.

11. Turn on your home air-conditioning via your computer as you leave work so your home is a comfortable temperature upon your return.
Fancy products and systems are useless if you can't use them, or you don't like using them. We pride ourselves in developing the easiest products to use. We want you to enjoy bringing your home to life with our products everyday. Choose from a variety of styles, sizes and capacities to suit your preferred method of use, budget and the context in which the product will be integrated.

Similar to the 10” Multimedia Touchscreen on the opposite page, this screen is a central control point for all of the electrical functions in every room of your home. Activate scenarios, turn-off systems and play your favourite music with ease. Incorporate a few of these in your home – master bedroom, living room, garage - to maximise your control and limit pacing about from room to room, upstairs to downstairs and the like.
Icons are great tools for improving clarity and speed of use. They also make high-tech devices appear friendly and approachable. We’ve spent a large amount of time researching, crafting and testing our icons to maximise the ease of use of our interfaces – creating an intuitive navigation system.

Multimedia Touchscreen

This Multimedia Touchscreen is a central control point for all of the electrical functions in every room of your home – lighting, blinds, awnings, shutters, air-conditioning, heating, audio entertainment, and video intercoms.

Here are a few examples of what you can control from this screen:

• Quickly turn-off all lighting and air-conditioning when you are running out the door for work
• Import iTunes playlists and pipe the music around the house to lift your mood
• See and speak with visitors at the front gate – you can expand the crystal clear image to full screen for optimal viewing
• View surveillance camera footage. This makes it easier for you to monitor children and mischievous pets in bedrooms, the backyard or the pool. It also allows you to safely check the perimeter of your home when you hear strange noises
• Enjoy easy access to your favourite online radio stations and your preferred news feeds – set-up the RSS feeds you like and relish your own customised news and entertainment service every day. There’s no need to listen to presenters you don’t like or music you don’t like
• Display photographs on the screen like a digital photo frame via a SD card
• Browse folders of images and videos via the USB input
• Add a ‘Pool’ icon and switch on the pool cleaning system with a simple tap.

“Import iTunes playlists and pipe the music around the house to lift your mood”
Every little bit counts! An aware user is one who saves, so we’ve developed an energy management system to enable you to see how much gas, water and electricity your home is consuming. With a few simple finger-taps you can see how much energy is being consumed at a particular moment, how much you used last month, and even how much power your solar panels are generating. And by setting tariff values, you can also keep track of how much your next bill is likely to be. Here are a few examples of what you can display:

- Instantaneous consumption
- Daily and monthly consumption
- Total consumption for the last 12 months
- Power generated by your solar panels
Arteor conventional devices, such as standard switches and powerpoints, and automation devices such as scenario controllers and touchscreens, share the same coverplates and aesthetic style. This ensures uniformity throughout your home. It is a unique benefit of Arteor over other home automation systems.
No two people are the same. Therefore, we believe you need to be free to express your personality and embellish your personal retreat in a manner befitting your style, status and individuality. We want you to experiment and customise each of your rooms. We’ve scoured the globe for delectable materials and finishes, anticipated design trends, and developed the largest range of switch styles and coverplate finishes available in Australia and New Zealand. Even switching actions of traditional switches were scrutinised and ergonomically improved for a satisfying touch – we love full-bodied, tight switching actions that personify quality. Ask your installer to see samples of all of the Arteor finishes and switch styles.

Completely smooth from top to bottom and side to side, these touchplates are the perfect complement to modern homes with ultra clean lines and a pared-back aesthetic.
The circle theme allows the hand to move in a more natural and intuitive way. The shape creates a dynamic juxtaposition with the rectangle and square plates for added intrigue.

Challenge tradition: switches do not have to be rectangular. The square adds discerning detail.
Choose from 17 exquisite coverplate finishes.

- White
- Pearl Alu
- Graphite
- Tattoo
- Mirror White
- Mirror Black
- Mirror Taupe
- Mirror Red
- Formal
- Casual

- Gold Brass
- Wenge Style (wood)
- Light Oak
- Club Leather
- Galuchat (stingray leather)
- Woven Metal
Arteor is the easiest system to program and install

Why is this important to you? It will save you money! With a system that is easier to program and install you will spend less money on labour costs. You are also much less likely to experience the inconvenience of problems associated with incorrect programming. It is also much easier to update and upgrade your system at any time.

Legrand, a global leader

Although new to Australia, Legrand is a global leader in products for electrical systems and information networks. With offices in more than 70 countries and a research and development team of more than 1,000 employees, we are constantly scouring the globe for new technologies and trends in order to forge breakthroughs in electrical systems for your home. You can be confident Legrand will continue to support you and deliver the most beautiful and innovative products available. If you would like more information, or need to find an installer, please give us a call.
